Versatile

A Komatsu short tail swing PC78US-11 and PC88MR-11 excavator offers an ideal combination of performance, versatility and fuel efficiency in a powerful, easy-to-transport package.

Compact but powerful

Their reduced tail swing radius makes them ideal for work on roadways, bridges, urban areas or anywhere space is limited. Extremely transportable, the new PC78US-11 and PC88MR-11 has powerful hydraulic flow for hammers, thumbs and other attachments. Fast boom and arm speed make it an ideal solution when your crews work in confined spaces or an urban environment.

Excavator	Operating weight range	Horsepower	Bucket capacity

An excavator designed for your underground utility, general construction and tight urban job sites

Compact design

Whether next to structures or in a single lane of traffic, you need a compact, short tail swing to give you the maneuverability you need in confined areas. The large raising angle of the PC78's conventional boom design reduces the front bucket swing radius. Digging parallel to buildings or barriers is made easier with the PC88's swing boom design.

Fast cycles and custom modes

Count on a machine you can tailor to the task required, whether you're focusing on performance or fuel savings. Six working modes are available to adapt to your needs. Faster boom-up/swing speed, combined with responsive quick arm speed, makes excavating and leveling work easier and more efficient than previous models.

Versatility and efficiency come standard

Standard high flow auxiliary hydraulics with proportional joysticks allows you incredible job versatility while providing precise attachment control. Standard grading blade with new moldboard profile improves backfilling and light grading efficiency over previous models.

Maximum operator comfort

Operator comfort is key to your operation's productivity. Quiet and climate-controlled, our cab also features an air suspension seat, Bluetooth radio and a sliding cab door for easier entry and exit of a confined space. A high-resolution monitor with rearview camera and LED lights provide exceptional visibility, even at night.

Fuel efficient, low-cost power

Helping you reduce your bottom line is important to us. Less maintenance and lower fuel cost mean lower total cost of ownership. The new high-efficiency power package and viscous fan clutch work together to improve overall productivity and a smart, simplified catalytic system removes soot without a diesel particulate filter.

Quick and easy maintenance

Periodic maintenance is highly efficient with large service access doors and grouped service points with ground-level access.
